.bashrc

starship.toml

Microsoft.==PowerShell==_profile.ps1

这几个文件在 E:\downloads\weiyun\disk\latest\programs，通过ln或者mklink创建引用

```
1  # on wsl
2  mkdir ~/.config  # It's possible this already exists, especially if you've i
3  ln -s /mnt/e/downloads/weiyun/disk/latest/programs/bashrc/starship.toml ~/.co
4  ln -s /mnt/e/downloads/weiyun/disk/latest/programs/wsl/.bashrc ~/.bashrc
5
6  # on win11
7  mklink %USERPROFILE%\.starship\starship.toml %CURRENT_DIR%bashrc\starship.tom
8  mklink %USERPROFILE%\Documents\WindowsPowerShell\Microsoft.PowerShell_profile
9
```

install wsl

```
1   # list
2   wsl -l
3
4   # to install WSL 2 on Windows 10 OS Build 2004 or later
5   # you need to open the command prompt app with Administrator permissions,
6   # and enter the following command:
7   wsl --install
8
9   # install
10  wsl --install -d Ubuntu-20.04
11
```

```
12  # uninstall
13  wsl --unregister Ubuntu-20.04
```

install scoop

```
1  # https://scoop.sh/
2  Set-ExecutionPolicy RemoteSigned -Scope CurrentUser
3  irm get.scoop.sh | iex
4
5  # install an editor
6  scoop install micro
```

install starship

on win11

```
1  scoop install starship
```

```
1  # C:\Users\blake\Documents\PowerShell\Microsoft.PowerShell_profile.ps1
2
3  Invoke-Expression (&amp;starship init powershell)
```

on wsl

```
1  # this might fail, then use the following conda command
2  #curl -sS https://starship.rs/install.sh | sh -s -- --platform unknown-linux-
3
4  conda install -c conda-forge starship
5
6  # ~/.bashrc
```

```
 7  eval "$(starship init bash)"

 8

 9  mkdir ~/.config  # It's possible this already exists, especially if you've in
10  ln -s /mnt/e/downloads/weiyun/disk/latest/programs/bashrc/starship.toml ~/.co
```

starship.toml

Microsoft.PowerShell_profile.ps1

starship.toml

这两个文件在

E:\downloads\weiyun\disk\latest\programs

install anaconda

```
1  sudo apt update
2  sudo apt upgrade
3  sudo apt install -y build-essential unzip git vim fzf
4
5  wget https://repo.anaconda.com/archive/Anaconda3-2023.07-2-Linux-x86_64.sh
6  bash Anaconda*-*-Linux-x86_64.sh
```

install fzf

[(1) Vim universe. fzf - command line fuzzy finder - YouTube](#)

```
1  sudo apt install fzf
2
3  # fzf keybinding, add it in .bashrc
4  source /usr/share/doc/fzf/examples/key-bindings.bash
```

install git aliases

```
1  Install-Module git-aliases -AllowClobber
```

```
1  # on win11, powershell administrator
2  scoop install fzf
3
4  Install-Module PSReadLine
5  Import-Module PSReadLine
6
7  Install-Module PowerType
8  Enable-PowerType
9  Set-PSReadLineOption -PredictionSource HistoryAndPlugin -PredictionViewStyle
10
11 Install-Module PSFzf
12 Import-Module PSFzf
13 Set-PsFzfOption -PSReadLineChordProvider 'Ctrl+d' -PSReadLineChordReverseHist
14
15 # install z
16 Install-Module -Name z
17
18 #scoop bucket add extras
19 #scoop install terminal-icons
20 Install-Module -Name Terminal-Icons
21
22 # refer to the following url for profile
23 #How to set up your PowerShell for a better developer experience | Medium
24 #https://medium.com/@dorlugasigal/how-to-set-up-your-powershell-f004c90bbafb
```

neovim

[Effective Neovim: Instant IDE - YouTube](#)

[nvim-lua/kickstart.nvim: A launch point for your personal nvim configuration (github.com)](#)

```
1  choco install neovim
2
3  # then, https://github.com/nvim-lua/kickstart.nvim
```

```
4 git clone https://github.com/nvim-lua/kickstart.nvim.git %userprofile%\AppDat
5 nvim --headless "+Lazy! sync" +qa
6
7 #no c compiler found! "cc", "gcc", "clang", "cl", "zig" are not executable.
8 choco install zig
```

others

```
1 # in win11's windows terminal
2 wsl sudo apt update
```

```
1 # in wsl's shell
2 ls /mnt/d
3
4 # open explorer
5 explorer.exe .
```
